

DEPARTMENT OF COMPUTER SCIENCE
UNIVERSITY OF ENGINEERING & TECHNOLOGY,
PESHAWAR

Course Title: Web Technologies
Course Code: CS 224
Instructor: Mr. Mohammad

Total Marks: 30 Marks

Submission Guidelines

- Submit complete files on the assignment on Google Classroom.
- Upload PDF report of the assignment.
- Upload video with voice explaining the implementation of each task.
- Submit the GitHub repository link and the live website URL in Google Classroom private comment section.
- Use the provided title page for your assignment.

Assignment No. 01

Interactive Event Management Web App

You have been hired as a front-end developer by a small event management company. They want a mini web application to manage and display upcoming events on their website. The application should allow users to view, add, and remove events dynamically. Additionally, the company wants the website to be interactive and visually appealing.

Your task is to develop a web page using HTML, CSS, and JavaScript according to the requirements below and deploy it on GitHub Pages so it is accessible online.

Requirements:

1. HTML Structure (10 points)

- Create a **responsive web page** with a proper layout:
 - Header with the company name: "Event Horizon"
 - Section to **display a list of events**
 - Form to **add a new event** with the following fields:
 - Event Name (text)
 - Event Date (date)

- Event Description (textarea)
 - Add Event button
- Footer with your name and current year
- Each event in the list should display:
 - Event name
 - Event date
 - Event description
 - Delete button

2. CSS Styling (10 points)

- Use external CSS to style the page:
 - Attractive header and footer
 - Card layout for each event
 - Different colors for upcoming and past events
 - Hover effects on buttons and event cards
 - Responsive design: works on desktop, tablet, and mobile
- Use flexbox or grid for layout

3. JavaScript Functionality (10 points)

- Use **JavaScript DOM manipulation** to:
 - Display initial events from a predefined array of objects
 - Add new events dynamically from the form
 - Validate the form: all fields required
 - Display a warning message if the form is incomplete
 - Delete an event from the list using the delete button
 - Highlight events in the past date differently (gray background)
 - Sort events by date in ascending order automatically after adding
 - Add a search bar to filter events by name or date

4. GitHub Submission (Required)

1. Create a new GitHub repository named event-management-webapp.
2. Upload all project files:

- index.html
 - style.css
 - script.js
3. Make the repository public.
 4. Enable GitHub Pages for the repository:
 - Go to Settings → Pages
 - Select the main branch and /root folder
 - Save and copy the live website URL
 5. Submit the GitHub repository link and the live website URL along with the assignment in Google Classroom private comment section.
